DETAILED ACTION

This Office Action is in response to the Amendment filed on May 9, 2002.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobson et al. (US 6,294,401 B1).

Jacobson et al shows (fig. 4) a microelectronic fabrication comprising a substrate (410), a spirally patterned conductor layer (426) formed over the substrate wherein the spiral pattern terminates in a microelectronic structure (425) formed within the center of the spirally patterned conductor layer. The spirally patterned conductor layer forms a planar spiral inductor and the microelectronic structure comprises a series of electrically interconnected sub-patterns. The substrate is employed within a microelectronic fabrication of integrated circuit microelectronic fabrications. The microelectronic structure is selected from the group consisting of bond pads. The microelectronic structure is actually a capacitor connected with a bond pad. (col. 7, lines 3-30). The spiral pattern is in the shape of a rectangle and comprises more than one loop. The spiral patterned conductor layer is formed of a conductor material consisting of non-magnetic metal (col. 7, lines 3-8). Jacobson shows all of the elements of the claims

except the at least four electrically interconnected sub-patterns. It would have been obvious to one of ordinary skill in the art to form three, four, etc., sub patterns since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the interconnected sub-patterns of Jacobson by adding more sub-patterns to form a microelectronic device having a desired function.

Response to Arguments

Applicant's arguments with respect to claims 9-15 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
